

Pattern Classification Duda Stork Solution Linear discriminant analysis (LDA), normal discriminant analysis (NDA), or discriminant function analysis is a generalization of Fisher's linear discriminant, a method used in statistics, pattern recognition and machine learning to find a linear combination of features that characterizes or separates two or more classes of objects or events. Linear discriminant analysis - Wikipedia

1. Introduction. Binary classification can be challenging when confronting class-imbalanced datasets. When the class distribution is too skewed, machine learning methods tend to generate classifiers that favor the majority class, assigning the most frequent label to most test samples. An alternative SMOTE oversampling strategy for high ... Chapter 4 Bayesian Decision Theory . 4.1 Introduction. Bayesian decision theory is a fundamental statistical approach to the problem of pattern classification. Chapter 4 Bayesian Decision Theory The Ramer-Douglas-Peucker algorithm, also known as the Douglas-Peucker algorithm and iterative endpoint fit algorithm, is an algorithm that decimates a curve composed of line segments to a similar curve with fewer points. Ramer-Douglas-Peucker algorithm - Wikipedia

Materials and methods. Imputation methods based on statistical techniques, e.g., mean, hot-deck and multiple imputation, and machine learning techniques, e.g., multi-layer perceptron (MLP), self-organisation maps (SOM) and k-nearest neighbour (KNN), were applied to data collected through the "El Álamo-I" project, and the results were then ... Missing data imputation using statistical and machine ... L'exploration de données [notes 1], connue aussi sous l'expression de fouille de données, forage de données, prospection de données, data mining, ou encore extraction de connaissances à partir de données, a pour objet l'extraction d'un savoir ou d'une connaissance à partir de grandes quantités de données, par des méthodes ... Exploration de données — Wikipédia
