

Section 2 Dna Technology Study The nature and purpose of synthesising human insulin. Since Banting and Best discovered the hormone, insulin in 1921. diabetic patients, whose elevated sugar levels (see fig. 1) are due to impaired insulin production, have been treated with insulin derived from the pancreas glands of abattoir animals. Recombinant DNA technology in the synthesis of human insulin A genealogical DNA test is a DNA-based test which looks at specific locations of a person's genome, in order to find or verify ancestral genealogical relationships or (with lower reliability) to estimate the ethnic mixture of an individual. Genealogical DNA test - Wikipedia DNA sequencing is the process of determining the nucleic acid sequence - the order of nucleotides in DNA. It includes any method or technology that is used to determine the order of the four bases: adenine, guanine, cytosine, and thymine.
